

How Process Engineers Take Full Control with Cowan's Electro-Hydraulic Actuators

cowan dynamics

Our HMI is your command center, giving you instant visibility and control to:

- Monitor key operating data including temperature, pressure, position, and oil levels in real time.
- Send commands such as position setpoints directly to the actuator.
- Troubleshoot quickly with all critical system information on one screen.

With an optional remote troubleshooting module, Cowan Technicians can resolve issues anywhere in the world and eliminate costly downtime.
